

1 start memcached server on terminal window

```
memcached -p 8182
```

2 start eval expression TCP server

```
python3 tcp_server.py
```

3 start HTTP server

```
python3 http_server.py
```

4 do tests on PostMan

check /status.html: GET `127.0.0.1:8180/status.html`

check /api/gettime: GET `127.0.0.1:8180/api/gettime`

check /api/evalexpression: Post `127.0.0.1:8180/api/evalexpression` with body like `1+2`

5 do test with HTTP client

run `python3 http_client.py`, then it will run some tests and output the result string on the terminal
